

Nelson Crowle – Software Programmer/Analyst

To produce significant technological advantages and financial gains for you, I enjoy creating innovative, high quality solutions for interesting problems. Give me your project and I will take it from an idea, analyze and evaluate alternative implementations and design a solution that gives you the best implementation, then I will program it, and work with you to make sure it exceeds your expectations.

My many years of experience allow me to provide you with a broad range of knowledge for out-of-the-box thinking. I offer you extensive analytic and programming skills in C++, Visual Basic, PHP, Perl, Python, and several other languages on Windows and Linux platforms, as well as on handheld devices. If you need TCP/IP or Sockets programming, I can write you fast and efficient low-level network interfaces. To provide you with a great web-based interface, I do JavaScript, Ajax, HTML, CSS, PHP, Java, MySQL, and other web technologies.

If you are looking for a very self-motivated and disciplined employee, I'm your man. I have had my own consulting company for 34 years, and have been working remotely for the past 20 years. I prefer telecommuting and remote work, with occasional travel as needed for face-to-face meetings with colleagues and clients.

I look forward to pushing the envelope of your technology, and providing you with tangible bottom-line gains.
